### PROFILE

I'm Aspiring front-end developer with a solid foundation in HTML, CSS, JavaScript and React seeking an entry-level position to apply my skills in building responsive, user-friendly web applications. Eager to contribute to a dynamic development team, enhance my coding expertise, and stay updated with the latest web technologies. Motivated to deliver creative and efficient solutions that provide exceptional user experiences while continuously learning and growing as a developer.

### PROJECT

#### Local directory database

2023-2024

- Local Directory database is a specialized platform designed to manage and display detailed information about the administrative divisions within Tamil Nadu.
- This system focuses on the districts, villages, blocks, and parliamentary constituencies, providing a comprehensive directory that allows users to explore and retrieve information easily.
- Admin panel for managing districts, blocks, and villages (add, delete, or update).
- Users can search and view data based on various criteria like district, block, and village.
- Secure login system for admin users, allowing only authorized personnel to make changes.
- Users can search for data based on various criteria, such as district-wise, parliament-wise, village-wise, or block-wise.
- Data is presented in an easy-to-navigate format, allowing users to view only the information they need.
- Front-End: HTML, CSS, JavaScript – for creating a responsive and user-friendly interface.
- Back-End: PHP – for server-side processing and handling user requests.
- Database: MySQL – for storing and managing all directory information.
- Server: XAMPP – used for local development and testing purposes.

### FRESHER OF WEB DEVELOPING

#### Portfolio

- Create a responsive portfolio using HTML, CSS, JavaScript for interactive features.

#### E-COMMERCE

- Responsive e-commerce website in React.js, Bootstrap/Tailwind CSS.
- Displays a variety of products with detailed descriptions, images, and prices.
- Users can search for products and apply filters based on categories, price range, and ratings.
- Secure login and registration system using JWT (JSON Web Tokens) for user authentication and session management.
- Integration with a third-party payment service (e.g., Stripe ) for secure online transactions.
- Create more than 10 static clones like (Blogger, Euroland, Jewellery shop ).
